SUMMARY

IT Specialist and Back-End Developer with over three years of experience designing, supporting, and maintaining backend systems and IT infrastructure across business environments. Proficient in Python, PHP, and SQL, with hands-on experience using Django, Node.js, and Laravel to develop secure, scalable applications and manage databases. Skilled in system administration, RESTful API development, and automation, delivering reliable technical solutions that improve business operations and user experience.

SKILLS

Programming: Python, JavaScript, PHP, Java, C++, C,
Back-End: Django, NodeJS, SQL, PHP
Front-End & Mobile: ReactJS, NextJS, Swift, UX/UI, WordPress
Automation & Integration: n8n, Zapier, OpenAI API, RESTful APIs
Miscellaneous: AWS, Docker, Git, GitHub, Agile, Linux
Cybersecurity: Network Security, Vulnerability Scanning, SIEM Tools, Firewalls

EXPERIENCE

Mam Diamond Inc. **Jan 2025 - Present**
IT specialist *Houston, USA*

- Manage and maintain the company's online shop, ensuring smooth day-to-day operations, product updates, and customer satisfaction.
- Install and configure hardware, software, systems, and networks to support business operations.
- Plan and execute system maintenance and upgrades to enhance performance and security.
- Set up staff accounts and permissions, streamlining onboarding and maintaining secure access control.
- Provide technical support to staff and resolve IT-related issues promptly, improving team efficiency overall.

InAshgabat **Jun 2019 - Nov 2021**
Back-End Developer *Ashgabat, Turkmenistan*

- Developed and maintained a PHP-based backend system, ensuring smooth content management and user interaction. Optimized MySQL databases, improving query performance by 40%, leading to faster content retrieval and improved website speed.
- Designed and integrated RESTful APIs for enhanced communication between the front end and back end, reducing content update times by 30%. Implemented security protocols based on OWASP standards, achieving a record of zero security breaches during my time in this role.
- Collaborated with the front-end team to deliver responsive designs and improve user engagement by 25%.

EDUCATION

North American University **Dec 2024**
B.S. in CS with a concentration in SWE

- GPA: Magna Cum Laude

Turkmen State Institute of Economics and Management **Jun 2018**
Bachelors and Masters, Marketing

- GPA: Magna Cum Laude

PROJECTS

URL Shortener Web App – Full-Stack PHP/Blade

Developed a Laravel-based URL shortening service using SQLite for rapid setup (~17,000+ links supported), integrated Blade templates for the front-end, configured environment via .env.example, and implemented database migrations and clean routing to deliver high-availability link redirection.

Customer Churn Prediction – Full Stack Python App with Machine Learning

Used ML Classification to predict customer churn in a company using 17,000 datapoints with Streamlit UI for Front-End.

FIFA World Cup 2026 Prediction – Machine Learning & Data Analytics

Built a Python-based model to predict match outcomes and tournament winners using historical FIFA data; applied classification algorithms, feature engineering, and simulation analysis to generate probability-based forecasts with data visualization.

AI Daily Summary Assistant — Google Calendar, Gmail & OpenAI Automation

Tools: n8n, Google Calendar API, Gmail API, OpenAI GPT-4o

Built an intelligent automation system using n8n, Google Calendar API, Gmail API, and OpenAI GPT-4o to generate personalized daily briefings. The workflow automatically retrieves scheduled meetings and recent related emails, processes them through GPT-4o to produce natural-language summaries, and delivers a consolidated report via email every morning. Implemented multi-node data flows for event parsing, API authentication, and JSON merging, ensuring accurate context extraction. Reduced manual review and planning time by over 90%, demonstrating strong skills in workflow orchestration, AI prompt engineering, and system integration.
